

2002 Tropical Cyclone Fatalities

The 2002 Atlantic Basin tropical cyclone season was very active with 12 named storms – 4 hurricanes and 8 tropical storms. Hurricane Lili made landfall along the Louisiana coast, the first landfalling hurricane since Irene in 1999. Eight named storms formed during September—the highest number on record for any month. On average, there are 10 named storms, 6 of which become hurricanes. Tropical storms and hurricanes caused 51 fatalities, compared to 24 in 2001. Tropical Storm Chataan struck Chuuk in Micronesia (Guam’s area of responsibility) and caused devastating mudslides, killing 47 people. Unfortunately, very little information was found on the age and gender of these deaths.
